# INTRODUCTION

## 1.1 PROJECT OVERVIEW

Food is essential for human life and has been the concern of many healthcare conventions. Nowadays new dietary assessment and nutrition analysis tools enable more opportunities to help people understand their daily eating habits, exploring nutrition patterns and maintain a healthy diet. Nutritional analysis is the process of determining the nutritional content of food. It is a vital part of analytical chemistry that provides information about the chemical composition, processing, quality control and contamination of food. The main aim of the project is to build a model which is used for classifying the fruit depends on the different characteristics like colour, shape, texture etc. Here the user can capture the images of different fruits and then the image will be sent the trained model. The model analyses the image and detect the nutrition based on the fruits like (Sugar, Fibre, Protein, Calories, etc.).

## 1.2. PURPOSE

Nutrition Analyzer helps in the detailed and perfect determination of the component nutrients present in any food item. Food components have vast bio metabolic roles and could affect human health severely.

Purpose of the AI powered Nutrition Analyzer is to help individuals who needs a proper nutrition assistant to achieve fitness ,to cure diseases through foods or to lead a healthy lifestyle. With the help of Artificial Intelligence , it was possible to achieve a proper nutrition analyzer which is capable of showing the nutrition content of the food when we give a picture of it.

# LITERATURE SURVEY

## 2.1 EXISTING SYSTEM

Controlled intake of nutrition is recommended as a condition for being a healthy individual. Knowing and monitoring how much food is consumed during the day, following the calorie and nutrition of these foods helps to control healthy nutrition. However there is no proper assistance to achieve it. Nutritional intake is fundamental to human growth and health, and the intake of different types of nutrients and micro-nutrients can affect health. The content of the diet affects the occurrence of disease, with the incidence of many diseases increasing each year while the age group at which they occur is gradually decreasing. The consumption of a wide variety of food items is necessary in order for the human body to obtain the right amounts of nutrients. Failing to follow such a well-balanced diet, in combination with a generally unhealthy way of living, has been shown to increase the risk for cardiovascular disease, type II diabetes and some forms of cancer.

## **2.3 PROBLEM STATEMENT DEFINITION**

### **Ideal situation :**

Ideally, a Nutrition Analyzer is available which will help people in assisting the nutrition analysis and help them in maintaining good health.

### **Reality :**

Currently there is no ideal nutrition analyzer is available. Those which are available, fails to satisfy the needs of the people. Some are not personalized while some are very complicated to be accessed by everyone. Hence, there is no Nutrition analyzer to guide and assist people.

### **Consequences :**

People tend to consume food without the knowledge of nutrition content of the food. This results in nutrition imbalance leading to nutrition deficiencies and diseases.

### **Proposal :**

Our project of Nutrition Analyzer for Fitness Enthusiasts Focus on Developing a simple Nutrition Analyzer which is capable of analyze the nutrition in the food by giving the picture of the food. This is achieved by Artificial Intelligence with Python, Deep learning ,CNN etc..

# IDEATION AND PROPOSED SOLUTION

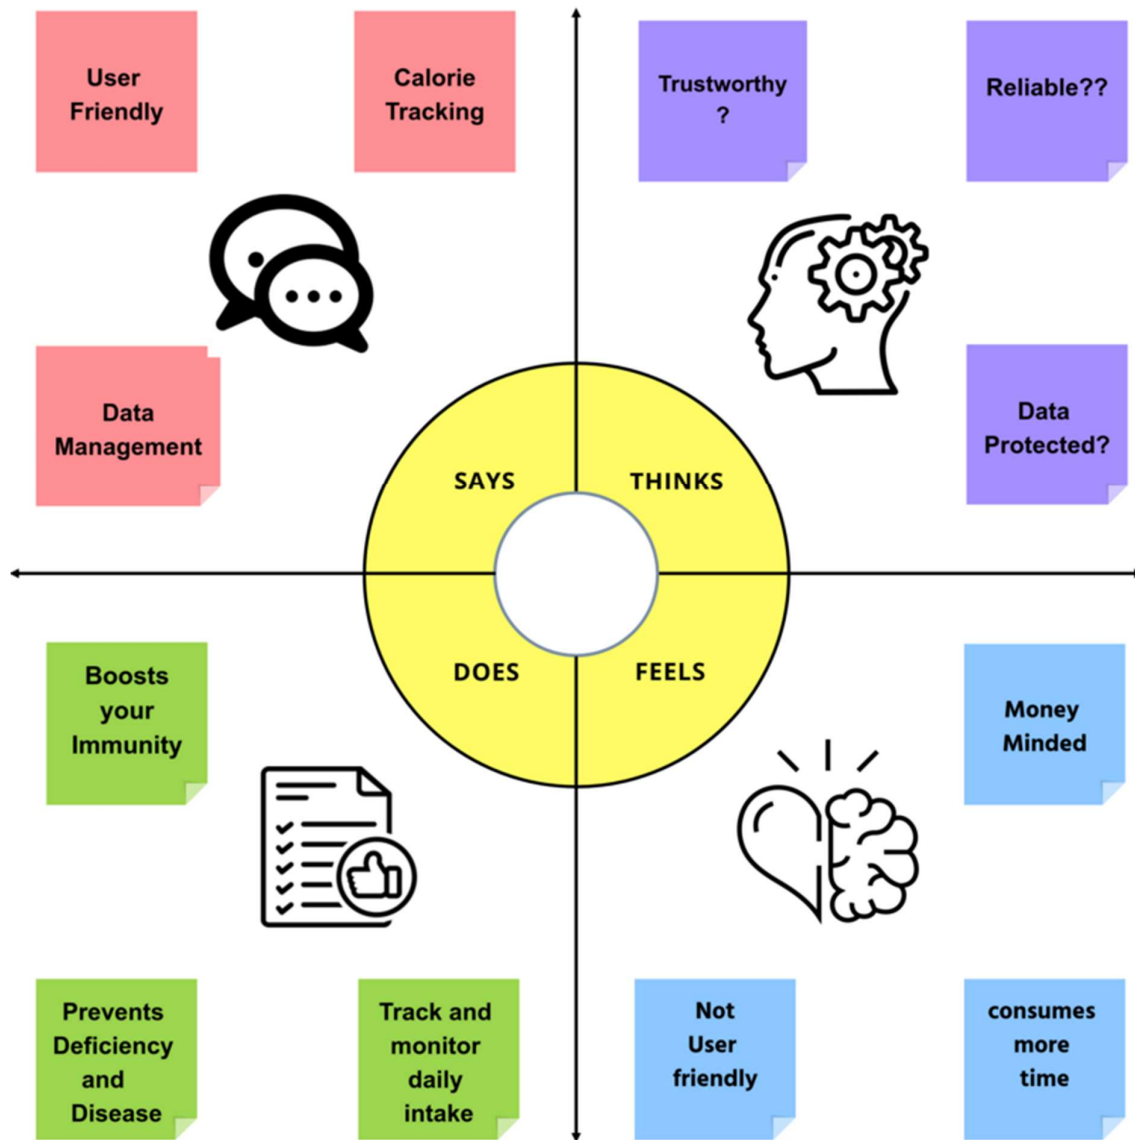

## 3.1 EMPATHY MAP CANVAS

Empathy mapping is a simple yet effective workshop that can be conducted with a variety of different users in mind, anywhere from stakeholders, individual use cases, or entire teams of people. It can be conducted by many different teams such as design teams, sales, product development or customer service. Essentially, it is an exercise that seeks to get inside the head of the customer as they interact with your product/service.

Nutrition Analyzer does the process of determining the nutritional content of the food that provides information about chemical composition, processing, quality control and containment of food

The following empathy map helped us to understand the customer needs and their expectations and to develop our Nutrition Analyser

# Empathy Map

### 3.2 IDEATION & BRAINSTORMING

2

#### Brainstorm

Write down any ideas that come to mind that address your problem statement.

10 minutes

**TIP**

You can select a sticky note and hit the pencil (switch to sketch) icon to start drawing!

**VUJI**

Door lighting facility	ELECTRONIC KEYCARD CUBE RESOLUTION	Fast and reliable switching device.
	Auto setting of voltage level (current safety) automatic voltage over current	Modularised versions for setting current level

**PANDISELVI**

Like arrival of train	Has connectivity to all systems (alarm system, camera)	Has partially done to track signal, mechanical
Simulation of time table	Working at Chennai, Bangalore, Bhopal, Bhubaneswar	

**KEERTHIKA**

Door opening Lockdown	Mechanical Cleaning	Smart ventilation Automatic Cleaning
Simulation of increased costs		

**BUVANESHWARI**

Safety and security	Track induction (Automatic Control) (Signal-PTC)	Network layer security, signaling, network, hardware
Security control center		

**PRIYA**

Smart booking	Integrated ticketing	Mobile Ticketing
Smart Card is used to purchase tickets through ATOM		

4

### Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

⌚ 20 minutes

### 3.3 PROPOSED SOLUTION:

S.NO	PARAMETERS	DESCRIPTIONS
1	Problem Statement (Problem to be solved)	Food is essential for human life and has been the concern of many healthcare conventions. Nowadays it has become even more difficult for people to understand their daily eating habits, exploring nutrition patterns and maintain a healthy diet.
2	Idea / Solution description	In order to guide people to follow healthier eating habits nutrition analyzer has to be introduced. Nutritional analyzer does the process of determining the nutritional content of food. It is a vital part of analytical chemistry that provides information about the chemical composition, processing, quality control and contamination of food
3	Novelty / Uniqueness	Consult Online Doctor/ Nutritionist, Research on some websites based on the nutrition and Chat- bots in which we can able to answer all our queries based on importantly in Calories, Nutritional Food content, Diet plans, Balanced food based charts etc..This also gives the correct solution and answer for the Nutrition to get fit in our life.
4	Social Impact / Customer Satisfaction	Being Healthy is very important and our project will help those who are trying to maintain their health. There are different food available and there are many undesirable contents in the food. Many people consume them unconsciously. Our project paves way for conscious eating and to control what we eat. This will help many people who are trying to eat according to their body needs like people with health conditions or some people who like to consume healthy content.

5	Business Model (Revenue Model)	The person using nutrition analyzer may avoid spending time and money for nutrition analyst instead by paying the less premium amount can communicate with nutritional specialists and get benefited.
6	Scalability of the Solution	AI powered Nutrition Analyzer for fitness provides the clear procedure daily consumption of food maintain a healthy diet. According to their tracking system for the person nutrients intake can increased or decreased.

### 3.4 PROBLEM-SOLUTION FIT

#### 1.Customer Segments:

Consults on Nutrition

#### 2.Jobs-to-be-done:

- Healthy diet plan
- Quality control of food
- Nutrition rich food recommendations
- Different nutrition pattern exploration
- Classification of food based on its nutrients

#### 3.Triggers

To maintain good health and to regulate their eating. Good intake of foods

#### 4.Emotion Before/After

**Before:** Depressed, Exhausted, Confused, Tense on body shape

**After :** Confidence, Delightful, Encouraged, Motivated, Customer became mentally and physically fit

## **5. Available Solutions**

- They can hire a personal nutritionist.
- They can consult dietitians
- They can use apps such as My Fitness Pal, Chronometer, Life Sum, etc...

## **6.Customer**

Lack of knowledge on understanding everything and go beyond on calorie counting, scared on getting help from the resources on analyzer, whether the premium amount for the premium is acceptable for the customers.

## **7. Behaviour**

Consulting doctors or nutritionist, enquiries about the food to be consumed, refer articles such as magazine, newspaper, watching exercises and yoga, searching it in websites, etc.....

## **8. Channels of Behavior**

Referring Articles, Checking websites related on nutrition, Consulting nutritionist on online, etc....

## **9. Problem Rootcause**

- Fast paced lifestyle
- Availability of low quality food
- Nutrition less food
- Improper diet plan
- Lack of health related awareness
- Emotional Eating
- Improper food timings

## **10. Solution**

Food has the power to influence metabolism and health directly. If food is the reason nutrition is the result, Hence we should give high importance to proper nutrition. Our project "AI Powered Nutrition Analyzer" helps people to get to know the nutrition content in their food and improve body health.

# REQUIREMENT ANALYSIS

## 4.1. FUNCTIONAL REQUIREMENTS

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	USER REGISTRATION	<ul style="list-style-type: none"><li>• Registration through Gmail</li><li>• Registration through Mobile Number</li><li>• Registration through Facebook</li></ul>
FR-2	USER CONFIRMATION	<ul style="list-style-type: none"><li>• Confirmation via Email</li><li>• Confirmation via OTP</li></ul>
FR-3	USER DETAILS	PERSONAL DETAILS FOOD DETAILS  Age,Food,Height,Recipe,Weight,Added ingredients,Diseases if any Age,Conditions is any,Allergies is any
FR-4	USER REQUIREMENTS	<ul style="list-style-type: none"><li>• The user simply inputs your recipe ingredients and amounts. The software will instantly produce an accurate readout of your dish in terms of nutritional analysis in a readable format that consumers are familiar with.</li><li>• With already given details the system can alert the consumer if any content of their allergies ,it can alert the consumer</li></ul>

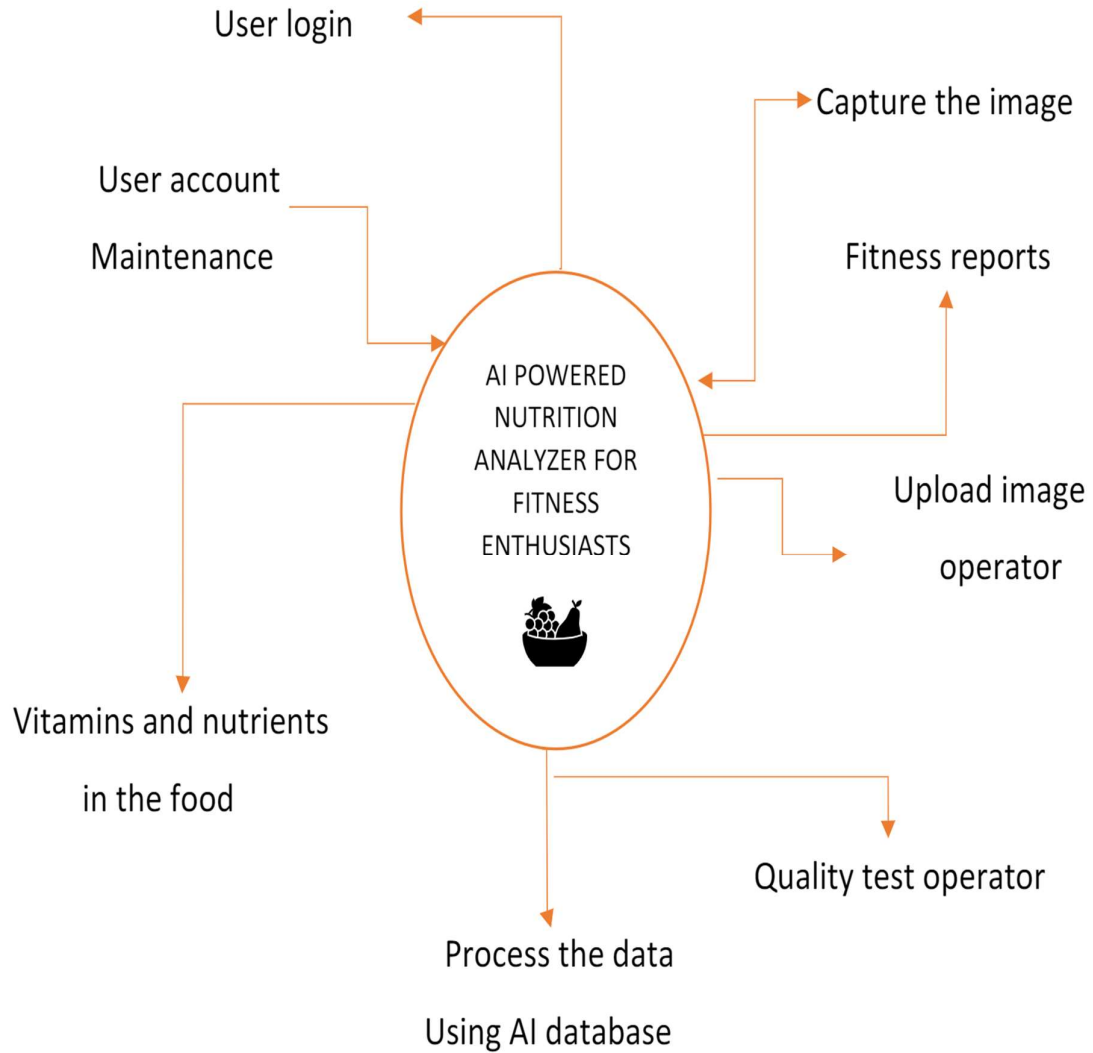

#### 4.2. NON-FUNCTIONAL REQUIREMENTS

FR No.	Non-Functional Requirement	Description
NFR-1	<b>Usability</b>	<ul style="list-style-type: none"> <li>• No training is required to access the Nutrition Analyzer.</li> <li>• The results should be loaded within 30 seconds.</li> <li>• It should be user friendly and comfortable.</li> <li>• It should be simple and easy to use.</li> <li>• The results should be self explanatory so that it can be understood by common people.</li> </ul>
NFR-2	<b>Security</b>	<ul style="list-style-type: none"> <li>• AI powered nutrition analyzer for fitness should contain more security in which our data which entered or maintained should be more security.</li> <li>• With the help of the username and password it provides more security in which it can access more securable and the data are private.</li> <li>• It should be social-economic which should access to sufficient and safe to use.</li> </ul>
NFR-3	<b>Reliability</b>	<ul style="list-style-type: none"> <li>• It is Important that the AI powered nutrition analyzer for fitness provides should Must reliable.</li> <li>• How a person can find it is reliable? It is easy to find that is he/she can compare the nutrition based food with other nutrition related application so, it can easily rectify whether it is reliable or not.</li> <li>• But it take too much time, to avoid this a reliable application should made in which it itself produces whether we can get correct solution or not. So, it is necessary that the AI powered nutrition analyzer for fitness should have proper data and information in which we can get a correct information about it and also get</li> </ul>

		<p>a proper guidance about it.</p> <ul style="list-style-type: none"> <li>• With the proper guideness and proper information in which we can get a nutrition properly and we can have get a proper fitness plan.</li> </ul>
NFR-4	<b>Performance</b>	<ul style="list-style-type: none"> <li>• It should provide more number of users to consume at any time and at any place.</li> <li>• It should provide Reliability, Scalability, Security and Usability.</li> <li>• It should contain minimum data while over-paging the websites or application and it is necessary that it should not exceed more than 20mb.</li> <li>• While consuming the page it should provide the response as much as possible without any delay or time traffic.</li> <li>• The connection should e properly maintained so that it can use while travelling or in remote places</li> </ul>
NFR-5	<b>Availability</b>	<ul style="list-style-type: none"> <li>• Easy to access Data.</li> <li>• Avoids Data redundancy and inconsistency.</li> <li>• Fast and Efficient.</li> <li>• User Friendly.</li> </ul>
NFR-6	<b>Scalability</b>	<ul style="list-style-type: none"> <li>• The architecture for AI powered Nutrition Analyzer for fitness provides the clear procedure daily consumption of food and helps the user to maintain a healthy diet.</li> <li>• According to their tracking system implemented in architecture provide the proper mechanism to the every individual of their nutrients intake which can be increased or decreased.The premium amount for analyzer is very much optimus</li> </ul>

# PROJECT DESIGN

## 5.1 DATA FLOW DIAGRAMS

## 5.2 SOLUTION & TECHNICAL ARCHITECTURE

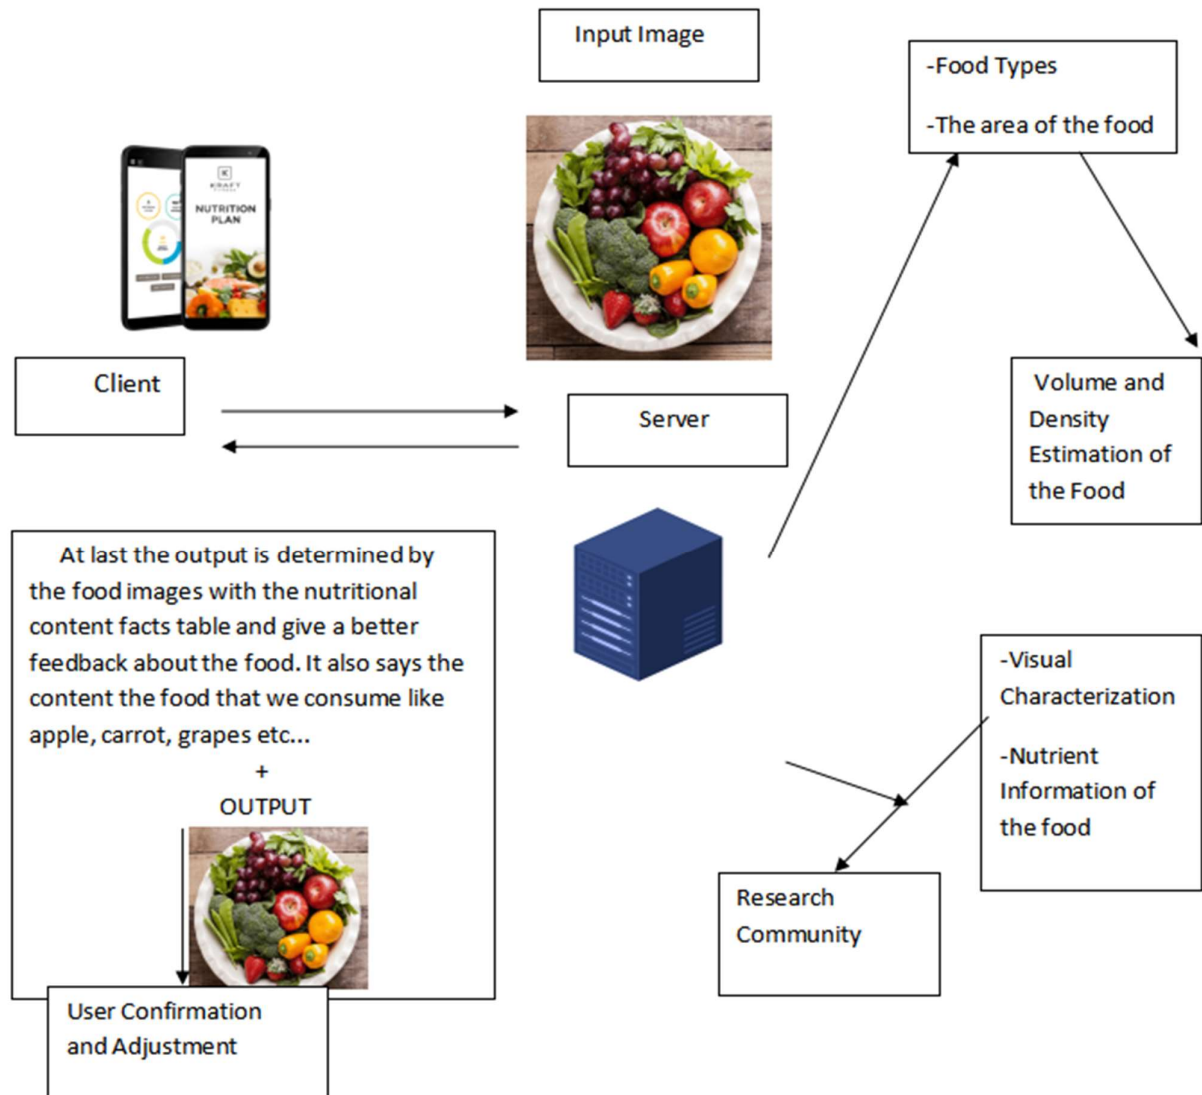

### TECHNICAL ARCHITECTURE:

#### **ABSTRACT :**

- The main aim of the project is to building a model which is used for classifying the fruit, vegetables, spinach, fish, meat, Green leafy vegetables etc..... depends on the different characteristics like colour, shape, texture etc.
- Here the user can capture the images of different fruits, vegetables, spinach, Green leafy vegetables, fish, meat , etc.. and then the image will be sent the trained model. The model analyses the image and detect the nutrition based on the fruits like (Sugar, Fibre, Protein, Calories, etc.).
- Food is essential for human life and has been the concern of many healthcare conventions. Nowadays new dietary assessment and nutrition analysis tools enable more opportunities to help people understand their daily eating habits, exploring nutrition patterns and maintain a healthy diet.
- Nutritional analysis is the process of determining the nutritional content of food. It is a vital part of analytical chemistry that provides information about the chemical composition, processing, quality control and contamination of food.
- This solution helps fitness enthusiasts to do Nutritional analysis of food which provides information about the chemical composition, processing, and quality control of food.
- The chance of occurrence of error is minimal since the model provides more precise reports of the analysis.

## **OBJECTIVES:**

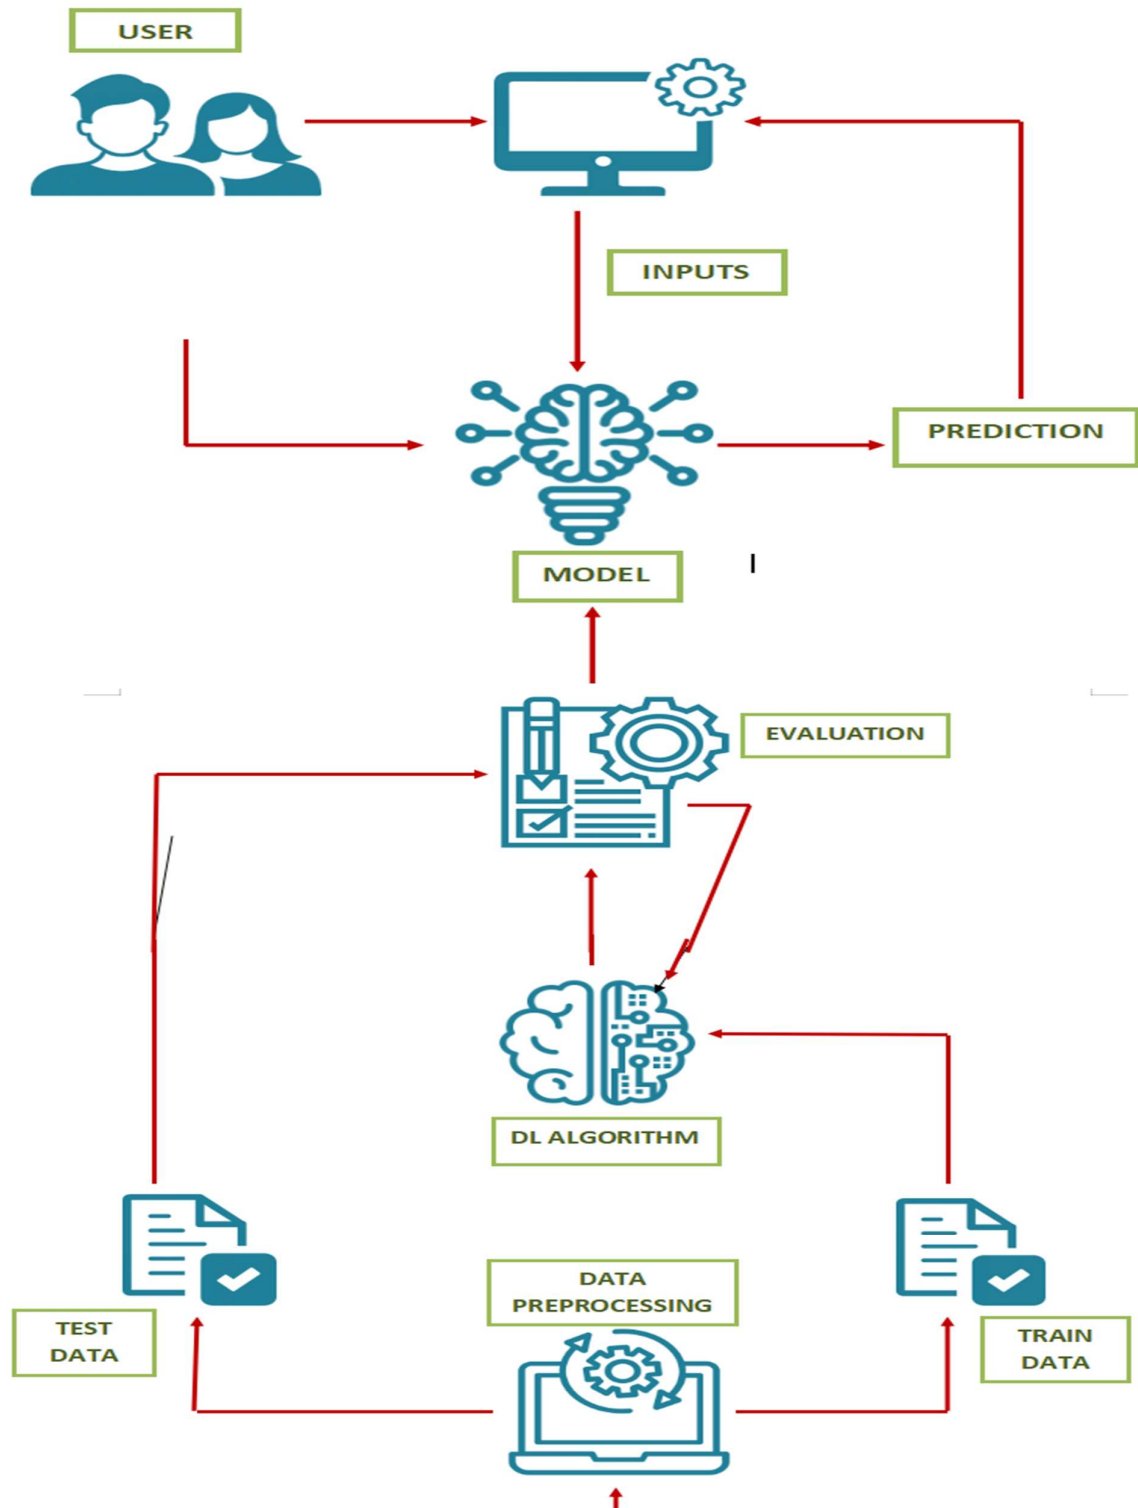

- Being healthy should be an integral component of your life. A Healthy intake of food can assist in the prevention of chronic diseases and long-term ailments.
- What you eat is closely related to your health. Eating a healthy diet can help boost your immune systems, help you maintain a healthy weight and can improve your overall health.
- The importance of diet can't be overstated for a healthy lifestyle. People get the vitamins, minerals and nutrients they need to function and thrive from the foods they eat, so choosing foods that offer the most of those components helps improve quality of life.
- It's just as important to limit foods that are high in fat, sugar, sodium and cholesterol as it is to choose healthy foods.
- Nutrition helps in functioning, maintaining, or improving important bio metabolisms like building muscles, producing energy, thriving body cells, improving body health, replenish malnourishment, and strengthening immunity. If food is the reason, Nutrition is the result.
- Consumers have become more concerned over the quality and compositions of their food purchases, the contained ingredients, and the presence of additives and contaminants. Therefore, knowledge of the chemical and biochemical composition of foods is important to the health, well-being, and safety of the consumers.
- We consume food so that we can obtain proper nutrition. Hence it is very important for us to know the composition of nutrients in our food.
- Through a nutrition analyzer we can measure the nutrients and with that information we can make a healthy diet by adding nutrients required for our body and excluding which is not good for health.

## **SOLUTION ARCHITECTURE:**

Being healthy should be an integral component of your life. A Healthy intake of food can assist in the prevention of chronic diseases and long-term ailments. What you eat is closely related to your health. Eating a healthy diet can help boost your immune systems, help you maintain a healthy weight and can improve your overall health. The importance of diet can't be overstated for a healthy lifestyle. People get the vitamins, minerals and nutrients they need to function and thrive from the foods they eat, so choosing foods that offer the most of those components helps improve quality of life. It's just as important to limit foods that are high in fat, sugar, sodium and cholesterol as it is to choose healthy foods. Nutrition helps in functioning, maintaining, or improving important bio metabolisms like building muscles, producing energy, thriving body cells, improving body health, replenish malnourishment, and strengthening immunity. If food is the reason, Nutrition is the result. Consumers have become more concerned over the quality and compositions of their food purchases, the contained ingredients, and the presence of additives and contaminants. Therefore, knowledge of the chemical and Biochemical composition of foods is important to the health, well-being, and safety of the consumers. We consume food so that we can obtain proper nutrition. Hence it is very important for us to know the composition of nutrients in our food. Through a nutrition analyzer we can measure the nutrients and with that information we can make a healthy diet by adding nutrients required for our body and excluding which is not good for health.

- This solution helps fitness enthusiasts to do Nutritional analysis of food which provides information about the chemical composition, processing, and quality control of food.
- The chance of occurrence of error is minimal since the model provides more precise reports of the analysis.
- First, the user captures the images of the food and uploads it.
- Next, the image will be sent to the trained model.
- The model will classify the food based on the different characteristics like colour

### **RELIABILITY:**

- It is Important that the AI powered nutrition analyzer for fitness provides should Must reliable.
- How a person can find it is reliable? It is easy to find that is he/she can compare the nutrition based food with other nutrition related application so, it can easily rectify whether it is reliable or not.
- But it take too much time, to avoid this a reliable application should made in which it itself produces whether we can get correct solution or not. So, it is necessary that the AI powered nutrition analyzer for fitness should have proper data and information in which we can get a correct information about it and also get a proper guidance about it.
- With the proper guidness and proper information in which we can get a nutrition properly and we can have get a proper fitness plan.
- It should also provides the information on nutrition and health which it should prevents from health information on diseases, health risks and prevention guidelines. It should also provides an extension a research based online learning network with several resource areas, so it provides more reliability in that area. For more reliable it can also contains the calorie information, balanced diet plans, what type food can consumed at what time etc..... So, by this way it can reliable.

### **SCALABILITY:**

- The architecture for AI powered Nutrition Analyzer for fitness provides the clear procedure daily consumption of food and helps the user to maintain a healthy diet.
- According to their tracking system implemented in architecture provide the proper mechanism to the every individual of their nutrients intake which can be increased or decreased.
- The premium amount for analyzer is very much optimum.

### **PERFORMANCE:**

- It should provide more number of users to consume at any time and at any place.
- It should provide Reliability, Scalability, Security and Usability.
- It should contain minimum data while over-paging the websites or application and it is necessary that it should not exceed more than 20mb.
- While consuming the page it should provide the response as much as possible without any delay or time traffic.

- The connection should be properly maintained so that it can be used while travelling or in remote places.
- The nutritious food to meet their dietary needs and the food preferences for an active and healthy life.
- It should be consistently accessible, availability and affordability of foods and beverages that promote well-being and prevent diseases.
- It should be suitable in all situations that exist to all people, at all times.

### **SECURITY:**

- AI powered nutrition analyzer for fitness should contain more security in which our data which is entered or maintained should be more secure.
- With the help of the username and password it provides more security in which it can access more securely and the data are private.
- It should be social-economic which should have access to sufficient and safe to use.

### **USABILITY:**

- No training is required to access the Nutrition Analyzer.
- The results should be loaded within 30 seconds.
- It should be user friendly and comfortable.
- It should be simple and easy to use.
- The results should be self explanatory so that it can be understood by common people.

### 5.3 USER STORIES-

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Mobile user, Web user)	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my account / dashboard	High	Sprint-1
		USN-2	As a user, I will receive confirmation email once I have registered for the application	I can receive confirmation email & click confirm	High	Sprint-1
		USN-3	As a user, I can register for the application through Facebook	I can register & access the dashboard with Facebook Login	Low	Sprint-2
		USN-4	As a user, I can register for the application through Gmail		Medium	Sprint-1
	Login	USN-5	As a user, I can log into the application by entering email & password		High	Sprint-1
	Dashboard	USN-6	Visit the dashboard for accessing the features of the application	The dashboard is user-friendly	Low	Sprint-1
	Upload Image	USN-7	Uploading the images of the food in the website	As a user, they are able to attend the food images	High	Sprint-3
	Predict	USN-8	The model is able to classify and predict the nutrients present in the food	From the images uploaded, I can access the nutrition facts	High	Sprint-3
		USN-9	We train the model to test various images and ensure that the output accuracy is good	'm able to train and test the application till the results are as accurate as possible	Medium	Sprint-4

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Web user)	Login	USN-10	As a user, I can use the application by entering my email and password.	I can access my account	Medium	Sprint-4
Customer Care Executive	Dashboard	USN-11	Upload the image	Recognizing and get the output	High	Sprint-1
Administrator	Security	USN-12	updated the features	checking the security	Medium	Sprint-1

## 6. PROJECT PLANNING & SCHEDULING

### 6.1 SPRINT PLANNING & ESTIMATION

Functional Requirement (Epic)	User Story Number	User Story / Task
<b>SPRINT - I</b>	<b>Data Collection &amp; Image Processing</b>	
	USN-1	Collect images of different food items organized into subdirectories based on their respective names
	USN-2	Import and configure the Image data generator library from Keras
	USN-3	Apply Image data generator functionality to training set and testing set
	USN-4	Improving the image data that suppresses unwilling distortions or enhances some image features important for further processing
<b>SPRINT - II</b>	<b>Model Building &amp; Testing</b>	
	USN-5	Importing the model building libraries and Initializing the model
	USN-6	Adding CNN layers, Dense layers & other necessary layers and Compile the model
	USN-7	Train & Test the model based on the image dataset
<b>SPRINT - III</b>	<b>Application building</b>	
	USN-8	Create HTML pages to design the front-end part of the web page
	USN-9	Create the flask application and loading the model file
	USN-10	Routing to the HTML page and Running the application
<b>SPRINT - IV</b>	<b>Cloud integration</b>	
	USN-11	Train the model on Cloud

## 6.2 SPRINT DELIVERY SCHEDULE

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)	Sprint Final submission date (last updates)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022	18.11.2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	20	05 Nov 2022	18.11.2022
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	20	12 Nov 2022	19.11.2022
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	20	19 Nov 2022	19.11.2022

## 7. CODING & SOLUTIONING

### 7.1.Feature 1

- AI-powered Nutrition Analyzer for Fitness Enthusiasts
- The main aim of the project is to building a model which is used for classifying the fruit depends on the different characteristics like colour, shape, texture etc. Here the user can capture the images of different fruits and then the image will be sent the trained model. The model analyses the image and detect the nutrition based on the fruits like (Sugar, Fibre, Protein, Calories, etc.).
- Languages : Python
- Tools/IDE : Google collaboratory , Spyder
- Libraries : Recommendation

### APP.PY

## 10. ADVANTAGES AND DISADVANTAGES

### Advantages:

- Food and food habits are ever-changing and evolving. People and professionals need to quickly adapt to new food products, diets, and changing preferences. The best way to instantly adapt to these changes is to have software that changes and adapts with you.
- Using automated nutrition analysis software will allow you to free up more time to innovate or grow your business. If you find a nutrition analysis software that has all the features you need, you can create much more time to focus on improving your business.
- Features such as a quick preview of nutrients while adding foods to diets, menus, and recipes give you the ability to save time when new recipes and food products are introduced.
- Having quick and easy software to help them plan their meals will save you tons of time.

### Disadvantages:

- This methodology is still limited by its dependency on time-consuming and error-prone manual video annotations, with many studies resorting to the use of multiple human annotators.
- Often suffers from reliability issues.
- It is extremely expensive due to semantics analysis model and nutritional analysis model.
- In order to make recommendations, the system needs to collect nutritional needs from users. Most of the information is only provided through continuous interactions with users. However, in reality, recording nutritional intake from users cannot avoid faults because users usually forget or give wrong information about the food they have consumed.
- Moreover deep learning requires expensive GUIs and hundreds of machines. This increases the cost to the users.

## **11. CONCLUSION**

Food is essential for human life and has been the concern of many health care conventions. In this project we have built a nutrition analysis model that classifies the nutritional content of the food through the image uploaded by the user. Such Nutritional analysis helps people understand their daily eating habits, exploring nutrition patterns and maintaining a healthy diet. It is a vital part of analytical chemistry that provides information about the chemical composition, processing, quality control and contamination of food.

The nutritional analysis model is implemented using Convolutional neural network and the web application is built and implemented using Flask framework. As for the future work, the model can be trained and tested on more datasets to provide accurate results and better performance.

## **12. FUTURE SCOPE**

The future scope of this project is very broad. Few of them are:

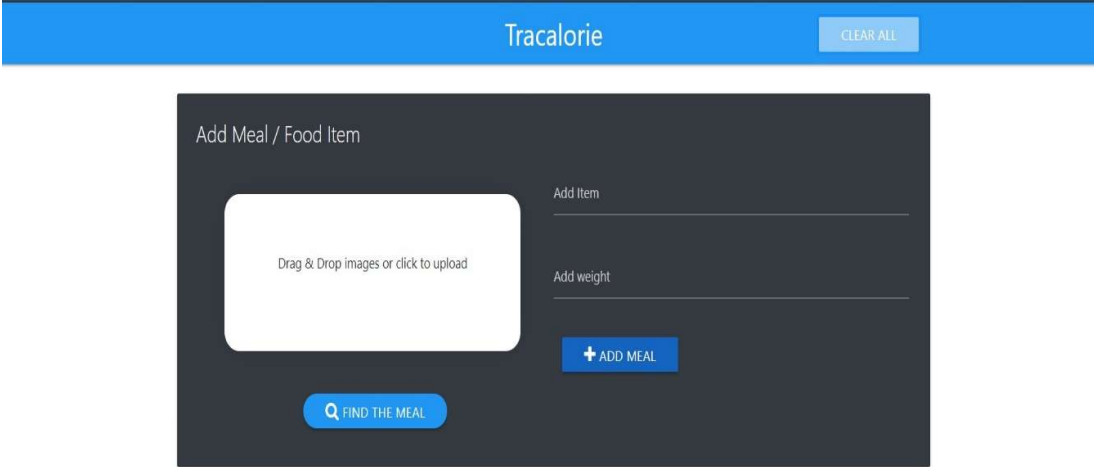

- The model could be trained using vast database in order to increase the accuracy of results.
- The Backend framework of the web application can be improved so that the uploaded images can be handled appropriately.
- In addition to the nutrition analysis, the application can also be designed to provide recipes that can be prepared using the nutrient-rich foods
- A database can also be implemented for the system so that users can save their data and relook into it later.
- The Web application can be further developed and launched as an Android App so that anyone anywhere with or without internet connection can access it and get benefited from its use cases.

## 12. FUTURE SCOPE

The future scope of this project is very broad. Few of them are:

- The model could be trained using vast database in order to increase the accuracy of results.
- The Backend framework of the web application can be improved so that the uploaded images can be handled appropriately.
- In addition to the nutrition analysis, the application can also be designed to provide recipes that can be prepared using the nutrient-rich foods
- A database can also be implemented for the system so that users can save their data and relook into it later.
- The Web application can be further developed and launched as an Android App so that anyone anywhere with or without internet connection can access it and get benefited from its use cases.

## 13.FUTURE ENCHANCEMENT:

The screenshot displays the 'Tracalorie' web application interface. At the top, a blue header bar contains the 'Tracalorie' logo and a 'CLEAR ALL' button. Below the header, a dark gray modal window titled 'Add Meal / Food Item' is shown. Inside this modal, there is a white rectangular area with the text 'Drag & Drop images or click to upload'. To the right of this area, there are two input fields: 'Add Item' and 'Add weight'. Below these fields is a blue button with a plus sign and the text '+ ADD MEAL'. At the bottom left of the modal, there is a blue button with a magnifying glass icon and the text 'FIND THE MEAL'. Below the modal, the text 'Total Calories: 0' is displayed.
